

## New 11.5mm Length RePlant® Implants Available

Our popular RePlant implant line has just expanded with the addition of an 11.5mm length. This new length is available for each of the four diameters (3.5, 4.3, 5.0 and 6.0mm) and is fully compatible with the RePlant Surgical Tray and the 11.5mm drills recently launched by Nobel Biocare.™ All RePlant drills already feature a demarcation line for the 11.5mm length.

Made of titanium alloy for added strength, RePlant features our patented micro-threads for increased stability plus double-lead body threads for faster insertion. The All-in-1 Packaging includes a cover screw and a fixture-mount that serves as both a transfer and temporary abutment.

RePlant implants are available in four common prosthetic platforms. Each platform features anodized color-coding for simplified restoration. In addition, the industry-standard internal tri-lobe connection gives you the flexibility to choose prosthetics from other systems as well.
